I. INTRODUCTION

A. RISK FACTORS

Standard Risk Factors:

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down depending on the various factors and forces affecting the capital markets and money markets as with any investment in stocks, shares and securities.
- Past performance of the Sponsor and their associates / AMC / Mutual Fund does not guarantee future performance of the Scheme of the Mutual Fund.
- Parag Parikh Conservative Hybrid Fund is only the name of the Scheme and the name of the Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The Sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs. 1 lakh made by them towards setting up the Fund.
- The present scheme is not a guaranteed or assured return scheme.

Scheme Specific Risk Factors:

Some of the specific risk factors related to the Scheme include, but are not limited to the following:

1. Risk Factors Associated with Fixed Income Securities and Money Market Instruments

Interest-Rate Risk: Fixed income securities such as government bonds, corporate bonds, and money market instruments and derivatives run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded.

Reinvestment Risk: Investments in fixed income securities carry reinvestment risk as interest rates prevailing on the coupon payment or maturity dates may differ from the original coupon of the bond.

Basis Risk: The underlying benchmark of a floating rate security or a swap might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements, leading to loss of value of the portfolio.

Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

Liquidity Risk: The liquidity of fixed income securities may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio.

Credit Risk: This is the risk associated with the issuer of a debenture/bond or a money market instrument defaulting on coupon payments or in paying back the principal amount on maturity. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is the safest. Corporate bonds carry a higher amount of credit risk than Government securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.

Liquidity Risk on account of unlisted securities: The liquidity and valuation of the Scheme investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment. The unlisted security can go down in value before the divestment date and selling of these securities before the divestment date can lead to losses in the portfolio.

Counterparty Risk: - This is the risk of failure of counterparty to a transaction to deliver securities against consideration received or to pay consideration against securities delivered, in full or in part or as per the agreed specification. There could be losses to the Scheme in case of a counterparty default.

Settlement Risk: Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.

Risks associated with unrated instruments: -Investments in unrated instruments are subject to the risk associated with investments in any other fixed income securities, as referred above. However, investments in unrated instruments are considered to be subject to greater risk of loss of principal and interest than rated instruments.

2. Risks associated with investments in Equity and Equity related instruments

- Equity and Equity related instruments are volatile in nature and are subject to price fluctuations on a daily basis. The volatility in the value of the equity and equity related instruments is due to various micro and macro-economic factors affecting the securities markets. This may have an adverse impact on individual securities /sector and consequently on the NAV of Scheme.
- The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities as in certain cases, settlement periods may be extended significantly by unforeseen circumstances. Similarly, the inability to sell securities held in the schemes portfolio may result, at times, in potential losses to the scheme, should there be a subsequent decline in the value of the securities held in the schemes portfolio.
- Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the scheme. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities.

- The AMC may invest in unlisted securities within the regulatory limit. This may however increase the risk of the portfolio as these unlisted securities are inherently illiquid in nature and carry larger liquidity risk as compared to the listed securities or those that offer other exit options to the investors.

3. Risks associated with Investing in Structured Obligation (SO) & Credit Enhancement (CE) rated securities

The risks factors stated below for the Structured Obligations & Credit Enhancement are in addition to the risk factors associated with debt instruments.

-Credit rating agencies assign CE rating to an instrument based on any identifiable credit enhancement for the debt instrument issued by an issuer. The credit enhancement could be in various forms and could include guarantee, shortfall undertaking, letter of comfort, etc. from another entity. This entity could be either related or non-related to the issuer like a bank, financial institution, etc. Credit enhancement could include additional security in form of pledge of shares listed on stock exchanges, etc. SO transactions are asset backed/ mortgage backed securities, securitized paper backed by hypothecation of car loan receivables, securities backed by trade receivables, credit card receivables etc. Hence, for CE rated instruments evaluation of the credit enhancement provider, as well as the issuer is undertaken to determine the issuer rating. In case of SO rated issuer, the underlying loan pools or securitization, etc. is assessed to arrive at rating for the issuer.

-Liquidity Risk: SO rated securities are often complex structures, with a variety of credit enhancements. Debt securities lack a well-developed secondary market in India, and due to the credit enhanced nature of CE securities as well as structured nature of SO securities, the liquidity in the market for these instruments is adversely affected compared to similar rated debt instruments. Hence, lower liquidity of such instruments, could lead to inability of the scheme to sell such debt instruments and generate liquidity for the scheme or higher impact cost when such instruments are sold.

-Credit Risk: The credit risk of debt instruments which are CE rated derives rating based on the combined strength of the issuer as well as the structure. Hence, any weakness in either the issuer or the structure could have an adverse credit impact on the debt instrument. The weakness in structure could arise due to inability of the investors to enforce the structure due to issues such as legal risk, inability to sell the underlying collateral or enforce guarantee, etc. In case of SO transactions, comingling risk and risk of servicer increases the overall risk for the securitized debt or assets backed transactions. Therefore, apart from issuer level credit risk such debt instruments are also susceptible to structure related credit risk.

4. Risk factors associated with investing in Derivatives:

The AMC, on behalf of the Scheme may use various derivative products, from time to time, in an attempt to protect the value of the portfolio and enhance Unit holders' interest. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Other risks include, the risk of mis-pricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and the decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the "counterparty") to comply with the terms of the derivatives contract. The Scheme

bears a risk that it may not be able to correctly forecast future market trends or the value of assets, indices or other financial or economic factors in establishing derivative positions for the Scheme.

Besides the price of the underlying asset, the volatility, tenor and interest rates affect the pricing of derivatives, trading in derivatives carry a high degree of risk although they are traded at a relatively small amount of margin which provides the possibility of great profit or loss in comparison with the principal investment amount.

Other risks in using derivatives include but are not limited to:

a. Credit Risk – This occurs when a counterparty defaults on a transaction before settlement and therefore, the Scheme are compelled to negotiate with another counter party, at the then prevailing (possibly unfavorable) market price, in order to maintain the validity of the hedge. For exchange traded derivatives, the risk is mitigated as the exchange provides a guaranteed settlement but one takes the performance risk on the exchange.

b. Liquidity risk - This risk arises from the inability to sell derivatives at prices that reflect the underlying assets/ rates/ indices, lack of availability of derivative products across different maturities and with various risk appetite.

c. Model Risk – This is the risk of mis–pricing or improper valuation of derivatives.

d. Basis Risk – This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged for example, when a bond is hedged using a derivative, the change in price of the bond and the change in price of the derivative may not be fully correlated leading to basis risk in the portfolio. The underlying benchmark of a floating rate security might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements, leading to loss of value of the portfolio. Example: Where swaps are used to hedge an underlying fixed income security, basis risk could arise when the fixed income yield curve moves differently from that of the swap benchmark curve or if there is a mismatch in the tenor of the swap and the fixed income security. Additional Risk viz. Basis Risk associated with imperfect hedging using Interest Rate Futures (IRF): The imperfect correlation between the prices of securities in the portfolio and the IRF contract used to hedge part of the portfolio leads to basis risk. Thus, the loss on the portfolio may not exactly match the gain from the hedge position entered using the IRF.

e. Market Risk: Derivatives are traded in the market and are exposed to losses due to change in the prices of the underlying and/or other assets and change in market conditions and factors. The volatility in prices of the underlying may impact derivative instruments differently than its underlying.

f. Valuation Risk: This is the risk of mis–pricing or improper valuation of derivatives due to inadequate trading data with good volumes.

g. Operational / Systemic Risk: This is the risk arising due to failure of operational processes followed by the exchanges and Over the Counter (OTC) participants for the derivatives trading.

h. Counterparty Risk: Counterparty risk is the risk that losses will be incurred due to the default by the counterparty for OTC derivatives.

i. Exposure Risk: An exposure to derivatives in excess of the hedging requirements can lead to losses. An exposure to derivatives can also limit the profits from a plain investment transaction.

j. Interest Rate Risk: This risk arises from the movement of interest rates in adverse direction. As with all the debt securities, changes in the interest rates will affect the valuation of the portfolios.

5. Risk factors Associated with Securitised Debt:

The Scheme may invest in domestic securitized debt such as Asset Backed Securities (ABS) or Mortgage Backed Securities (MBS). ABS are securitized debts where the underlying assets are receivables arising from various loans including automobile loans, personal loans, loans against consumer durables, etc. MBS are securitized debts where the underlying assets are receivables arising from loans backed by mortgage of residential / commercial properties.

At present in Indian market, following types of loans are securitized:

1. Auto Loans (cars / commercial vehicles /two wheelers)
2. Residential Mortgages or Housing Loans
3. Consumer Durable Loans
4. Personal Loans
5. Corporate Loans

In terms of specific risks attached to securitization, each asset class would have different underlying risks. Residential Mortgages generally have lower default rates than other asset classes, but repossession becomes difficult. On the other hand, repossession and subsequent recovery of commercial vehicles and other auto assets is fairly easier and better compared to mortgages. Asset classes like personal loans, credit card receivables are unsecured and in an economic downturn may witness higher default. A corporate loan/receivable, depend upon the nature of the underlying security for the loan or the nature of the receivable and the risks correspondingly fluctuate.

The Risks involved in Securitised Papers described below are the principal ones and does not represent that the risks set out hereunder is exhaustive.

Limited Liquidity & Price Risk

There is no assurance that a deep secondary market will develop for the Certificates. This could limit the ability of the investor to resell them.

Limited Recourse, Delinquency and Credit Risk

The Credit Enhancement stipulated represents a limited loss cover to the Investors. These Certificates represent an undivided beneficial interest in the underlying receivables and do not represent an obligation of either the Issuer or the Seller or the originator, or the parent or any associate of the Seller, Issuer and Originator. Delinquencies and credit losses may cause depletion of the amount available under the Credit Enhancement and thereby the Investor Payouts to the Certificate Holders may get affected if the amount available in the Credit Enhancement facility is not enough to cover the shortfall. On persistent default of an Obligor to repay his obligation, the Servicer may repossess and sell the Asset. However, many factors may affect, delay or prevent the repossession of such Asset or the length of time required to realise the sale proceeds on such sales. In addition, the price at which such Asset may be sold may be lower than the amount due from that Obligor.

Risks due to possible prepayments and Charge Offs

In the event of prepayments, investors may be exposed to changes in tenor and yield. Also, any Charge Offs would result in the reduction in the tenor of the Pass-Through Certificates (PTCs).

Re-investment Risk: Since prepayment risk increases when interest rates decline, this also introduces re-investment risk, which is the risk that the principal can only be reinvested at a lower rate.

Bankruptcy of the Swap Bank

If the Swap Bank becomes subject to bankruptcy proceedings then an Investor could experience losses or delays in the payments due under the Interest Rate Swap Agreement.

Risk of Co-mingling

With respect to the Certificates, the Servicer will deposit all payments received from the Obligors into the Collection Account. However, there could be a time gap between collection by a Servicer and depositing the same into the Collection account especially considering that some of the collections may be in the form of cash. In this interim period, collections from the Loan Agreements may not be segregated from other funds of originator. If originator in its capacity as Servicer fails to remit such funds due to Investors, the Investors may be exposed to a potential loss.

6. Risk factors associated with Securities Lending

As with other modes of extensions of credit, there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to

return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary.

7. Risk Factors Associated with Investments in REITs and InvITs:

- **Interest-Rate Risk:** REITs & InvITs carry interest-rate risk. Generally, when interest rates rise, prices of existing securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates.
- **Market Risk:** REITs and InvITs are volatile and prone to price fluctuations on a daily basis owing to market movements. Investors may note that AMC/Fund Manager's investment decisions may not always be profitable, as actual market movements may be at variance with the anticipated trends. The NAV of the Scheme is vulnerable to movements in the prices of securities invested by the scheme, due to various market related factors like changes in the general market conditions, factors and forces affecting capital market, level of interest rates, trading volumes, settlement periods and transfer procedures.
- **Risk of lower than expected distributions:** The distributions by the REIT or InvIT will be based on the net cash flows available for distribution. The amount of cash available for distribution principally depends upon the amount of cash that the REIT/InvIT receives as dividends or the interest and principal payments from portfolio assets. The cash flows generated by portfolio assets from operations may fluctuate based on, among other things:
 - success and economic viability of tenants and off-takers
 - economic cycles and risks inherent in the business which may negatively impact valuations, returns and profitability of portfolio assets
 - debt service requirements and other liabilities of the portfolio assets and fluctuations in the working capital needs
 - ability of portfolio assets to borrow funds and access capital markets
 - amount and timing of capital expenditures on portfolio assets
- **Liquidity Risk:** This refers to the ease with which REIT/InvIT units can be sold. There is no assurance that an active secondary market will develop or be maintained. Hence there would be time when trading in the units could be infrequent. The subsequent valuation of illiquid units may reflect a discount from the market price of comparable securities for which a liquid market exists.
- **Reinvestment Risk:** Investments in REITs & InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or IDCW pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns. The above are some of the common risks associated with investments in REITs & InvITs. There can be no assurance that a Scheme's investment objectives will be achieved, or that there will be no loss of capital. Investment results may vary substantially on a monthly, quarterly or annual basis.
- **Price-Risk:** The valuation of the REIT/InvIT units may fluctuate based on economic conditions, fluctuations in markets (eg. real estate) in which the REIT/InvIT operates. As an indirect shareholder of portfolio assets, unit holders rights are subordinated to the rights of creditors, debt holders and other parties specified under Indian law in the event of insolvency or liquidation of any of the portfolio assets.

The above are some of the common risks associated with investments in REITs & InvITs. There can be no assurance that a Scheme's investment objectives will be achieved, or that there will be no loss of capital. Investment results may vary substantially on a monthly, quarterly or annual basis.

8. Risk factors associated with Segregated Portfolio

Different types of securities in which the scheme would invest carry different levels and types of risk as given in the Scheme Information Document of the scheme. In addition to the same, unitholders are requested to also note the following risks with respect to Segregated Portfolio:

Liquidity Risk: A lower level of liquidity affecting an individual security (ies) or an entire market may have an adverse bearing on the value of the Segregated Scheme's assets. This may more importantly affect the ability to sell particular securities with minimal impact cost as and when necessary to meet requirements of liquidity or to sell securities in

response to triggers such as a specific economic/corporate event. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of a few of the investments. This may impact the NAV of the segregated portfolio and could result into potential loss to the Unit holders.

Credit risk: The scheme's risk may increase or decrease depending upon its investment pattern. E.g. corporate bonds carry a higher amount of risk than Government securities. Further, even among corporate bonds, bonds, which are AA rated, are comparatively more risky than bonds, which are AAA rated. Investment in unrated securities may be riskier compared to investment in rated instruments due to non-availability of third party assessment on the repayment capability of the issuer. As the securities are unrated, an independent opinion of the rating agency on the repayment capability of the issuer will not be available. The issuer of a debenture/ bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may go down because the credit rating of an issuer goes down. This may impact the NAV of the segregated portfolio and resultant loss to the Unit holders.

Listing of units: Listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further, trading price of units on the stock market may be significantly lower than the prevailing NAV.

9. Risk Factors associated writing covered call options for equity shares:

a) Writing call options are highly specialized activities and entail higher than ordinary investment risks. In such investment strategy, the profits from call option writing is capped at the option premium, however the downside depends upon the increase in value of the underlying equity shares. This downside risk is reduced only to the extent of premium received by writing covered call options.

b) The Scheme may write covered call option only in case it has adequate number of underlying equity shares as per regulatory requirement. This would lead to setting aside a portion of investment in underlying equity shares. If covered call options are sold to the maximum extent allowed by regulatory authority, the scheme may not be able to sell the underlying equity shares immediately if the view changes to sell and exit the stock. The covered call options need to be unwound before the stock positions can be liquidated. This may lead to a loss of opportunity or can cause exit issues if the strike price at which the call option contracts have been written become illiquid. Hence, the scheme may not be able to sell the underlying equity shares, which can lead to temporary illiquidity of the underlying equity shares and result in loss of opportunity.

c) The writing of covered call option would lead to loss of opportunity due to appreciation in value of the underlying equity shares. Hence, when the appreciation in equity share price is more than the option premium received the scheme would be at a loss.

d) The total gross exposure related to option premium paid and received must not exceed the regulatory limits of the net assets of the scheme. This may restrict the ability of Scheme to buy any options.

e) Increased volatility in the market may result in higher premium and marked to market losses in NAV for all the existing short option position even at the same price of underlying stock.

10. General Risk factors:

Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. The NAV of the Units of the Scheme can go up or down because of various factors that affect the capital markets in general.

As the liquidity of the investments made by the Scheme could, at times, be restricted by trading volumes and settlement periods, the time taken by the Mutual Fund for redemption of Units may be significant in the event of an inordinately large number of redemption requests or restructuring of the Scheme. In view of the above, the Trustee has the right, in its sole discretion, to limit redemptions (including suspending redemptions) under certain circumstances, as described under "Right to Limit Redemptions" in Section 'Restrictions, if any, on the right to freely retain or dispose of units being offered'. The Scheme may retain certain investments in cash or cash equivalents for its day-to-day liquidity requirements.

Investment strategy to be adopted by the Scheme may carry the risk of significant variance between the portfolio allocation of the Scheme and the Benchmark particularly over a short to medium term period.

Performance of the Scheme may be affected by political, social, and economic developments, which may include changes in government policies, diplomatic conditions, and taxation policies.

11. Risk factors associated with processing of transaction through Stock Exchange Mechanism:

The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognised stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing/settlement, etc. upon which the Fund has no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s).

12. Risks associated with investments in Repo transactions in Corporate Bonds

In repo transactions, also known as a repo or sale repurchase agreement, securities are sold with the seller agreeing to buy them back at later date. The repurchase price should be greater than the original sale price, the difference effectively representing interest. A repo is economically similar to a secured loan, with the buyer receiving corporate debt securities as collateral to protect against default. The Scheme may invest in repo of corporate debt securities which are subject to the following risks:

Counterparty Risk: This refers to the inability of the seller to meet the obligation to buy back securities at the contracted price on the contracted date. The Investment Manager will endeavour to manage counterparty risk by dealing only with counterparties, having strong credit profiles. Also, the counterparty risk is to an extent mitigated by taking collateral equivalent in value to the transaction after knocking off a minimum haircut on the intrinsic value of the collateral. In the event of default by the repo counterparty, the scheme shall have recourse to corporate debt securities.

Collateral Risk: Collateral risk arises when the market value of the securities is inadequate to meet the repo obligations. This risk is mitigated by restricting participation in repo transactions with collateral bearing a minimum rating as prescribed by the regulators (currently AA or equivalent and above rated money market and corporate debt securities). Any rating downgrade will tantamount to either an early termination of the repo agreement or a call for fresh margin to meet the minimum haircut requirement. In addition, the Investment manager may apply a higher haircut on the underlying security than mentioned above to adjust for the illiquidity and interest rate risk on the underlying instrument. The adequacy of the collateral will be monitored on a daily basis by considering the daily market value & applying the prescribed haircut. In the event of shortfall in the collateral, the counterparty shall be asked to replenish the same. If the counterparty is not able to top-up either in form of cash / collateral, it shall tantamount to early termination of the repo agreement.

Settlement Risk: Corporate Bond Repo shall be settled between two counterparties in the OTC segment unlike in the case of Government securities repo transactions where CCIL stands as central counterparty on all transactions which neutralizes the settlement risk. However, the settlement risk pertaining to CDRs shall be mitigated through Delivery versus Payment (DvP) mechanism which is followed by all clearing members.

Backstop facility in form of investment in Corporate Debt Market Development Fund (CDMDF):

CDMDF is set up as a scheme of the Trust registered as an Alternative Investment Fund ('AIF') in accordance with the SEBI (Alternative Investment Funds) Regulations, 2012 ("AIF Regulations"). The objective of the CDMDF is to help to develop the corporate debt market by providing backstop facility to instill confidence amongst the market participants in the corporate debt/bond market during times of market dislocation and to enhance the secondary market liquidity. In times of market dislocation, CDMDF shall purchase and hold eligible corporate debt securities from the participating investors (i.e., specified debt-oriented MF schemes to begin with) and sell as markets recover. The CDMDF will thus act as a key enabler for facilitating liquidity in the corporate debt market and to respond quickly in times of market dislocation. The trigger and period for which the backstop facility will be open shall be as decided by SEBI. Thus, this backstop facility will help fund managers of the aforementioned Schemes to better generate liquidity during market dislocation to help the schemes fulfill liquidity obligations under stress situation.

In accordance with the requirement of regulation 43A of SEBI (Mutual Funds) Regulations, 1996 read with SEBI circular no. SEBI/HO/IMD/PoD2/P/CIR/2023/129 dated July 27, 2023 on Investment by Mutual Fund Schemes in units of Corporate Debt Market Development Fund, the aforementioned schemes shall invest 25 bps of its AUM as on December 31, 2022 in the units of the Corporate Debt Market Development Fund ('CDMDF'). An incremental contribution to CDMDF shall be made every six months to ensure 25 bps of scheme AUM is invested in units of CDMDF. However, if AUM decreases there shall be no return or redemption from CDMDF. Contribution made to CDMDF, including the appreciations on the same, if any, shall be locked-in till winding up of the CDMDF.

Investments in CDMDF units shall not be considered as violation while considering maturity restriction as applicable for various purposes (including applicable Investment limits) and the calculations of Potential Risk Class (PRC) Matrix, Risk-o-meter, Stress testing and Duration for various purposes shall be done after excluding investments in units of CDMDF.

Investors are requested to read detailed disclosure on investment of the schemes in the CDMDF as listed in sub-section "C. How will the Scheme allocate its assets? And sub-section D. Where will the Scheme Invest" in Section "Section II- Information about the scheme".

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. However, if such limit is breached during the NFO of the Scheme, the Fund will endeavour to ensure that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the Scheme complies with these two conditions. In case the Scheme does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the units would be redeemed at applicable NAV. The two conditions mentioned above shall also be compiled within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days notice to redeem his exposure over the 25 % limit. Failure on the part of the said investor to redeem his exposure over the 25 % limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

REQUIREMENT OF MINIMUM AVERAGE ASSETS UNDER MANAGEMENT (AUM)

The Scheme shall maintain an average AUM of Rs. 20 crores on half yearly rolling basis. In case, the average AUM falls below Rs. 20 crores, the AMC shall scale up the AUM of such Scheme within a period of six months so as to maintain the average AUM of Rs. 20 crores on half yearly rolling basis, failing which the Scheme shall be wound up in accordance with the provisions of Regulation 39 (2) (c) of SEBI (Mutual Funds) Regulations, 1996 as amended from time to time.

In this connection the Trustee / AMC reserves the right to reject any such application.

- As per SEBI circular No MRD/DoP/Cir- 05/2007 dated April 27, 2007, in order to strengthen the Know Your Client (KYC) norms and identify every participant in the securities market with their respective Permanent Account Number (PAN) thereby ensuring sound audit trail of all the transactions, PAN shall be the sole identification number for all participants transacting in the securities market, irrespective of the amount of transactions (except for specifically exempted cases). Exempted investors are required to provide alternate proof of identity in lieu of PAN for KYC purposes and are allotted PAN-exempt KYC Reference Number (PEKRN).

Valid PAN/PEKRN and KYC is mandatory for all financial transactions including non-investor initiated. If not furnished, then from April 1, 2023, the impact on non investor initiated transactions shall include:

1. IDCW reinvestment option/facility being automatically changed to IDCW payout option/facility.

Registrations under Transfer of IDCW Plan facility, being cancelled and IDCW declared, if any, being treated as "Payout".

2. All IDCW pay-out (including point 1 and 2 above) shall also be paid only after unit holders furnish their PAN/PEKRN.

Further, such investors will also be able to lodge grievance or make service requests only after furnishing the above details.

Currently, as per Section 139AA of the Income Tax Act, 1961, every person who has been allotted a PAN as on July 1, 2017, and who is eligible to obtain an Aadhaar number, shall have to mandatorily link their Aadhaar and PAN latest by June 30, 2023 or such other timeline as may be notified by SEBI from time to time, failing which such PAN shall become inoperative immediately thereafter and attract higher TDS and transaction restrictions.

Note: Presently, Aadhaar-PAN linking does not apply to any individual who is (a) residing in the States of Assam, Jammu and Kashmir, and Meghalaya; (b) a non-resident as per the Income Tax Act, 1961 (NRI as per Income Tax records); or (c) of the age of eighty years or more at any time during the previous year; or (d) not a citizen of India.

However, these exemptions may change or be revoked later.

- SEBI vide its circular dated June 15, 2022, as amended from time to time, has made it mandatory for investors subscribing to mutual fund units on or after October 1, 2022, to either provide nomination details or opt out of nomination in prescribed format. Further, all existing individual unit holder(s) (either sole or joint) are required to provide nomination / opt out of nomination by January 1, 2024 or such other timeline as may be notified by SEBI from time to time, failing which their folios shall be frozen for debits.
- Subject to the approval of Board of Directors of the AMC and Trustee Company and immediate intimation to SEBI, a restriction on redemptions may be imposed by the Scheme under certain exceptional circumstances, which the AMC / Trustee believe that may lead to a systemic crisis or event that constrict liquidity of most securities or the efficient functioning of markets. Please refer to the paragraph "Right to Limit Redemptions" for further details.
- From time to time and subject to the Regulations, the Sponsor, the mutual funds and investment companies managed by them, their , their associate companies, subsidiaries of the Sponsor and the AMC may invest either directly or indirectly in the Scheme. The funds managed by these associates, the sponsor,

subsidiaries of the Sponsor and/or the AMC may acquire a substantial portion of the Scheme's Units and collectively constitute a major Investor in the Scheme. Accordingly, Repurchase/Redemption of Units held by such funds, associates and Sponsor may have an adverse impact on the Units of the Scheme because the timing of such Repurchase/Redemption may impact the ability of the other Unitholders to redeem their Units.

- **Levy of Stamp Duty on applicable mutual fund transactions**

Investors/ Unit holders of all Schemes of PPFAS Mutual Fund are requested to note that, pursuant to Part I of Chapter IV of the Notification dated February 21, 2019, issued by the Legislative Department, Ministry of Law and Justice, Government of India, on the Finance Act, 2019, read with subsequent notifications including Notification dated March 30, 2020 issued by Department of Revenue, Ministry of Finance, Government of India, a stamp duty at the rate of 0.005% of the transaction value would be levied on applicable mutual fund investment transactions such as purchases (including switch-in, Reinvestment of Income Distribution cum capital withdrawal option) with effect from July 1, 2020. Accordingly, pursuant to levy of stamp duty, the number of units allotted on purchases, switch-ins, Systematic Investment Plan (SIP) installments, Systematic Transfer Plan (STP) installments, Reinvestment of Income Distribution cum capital withdrawal option etc. to the unit holders would be reduced to that extent. The stamp duty will be deducted from the net investment amount i.e. gross investment amount less any other deduction like transaction charge. Units will be created only for the balance amount i.e. Net Investment Amount as reduced by the stamp duty. The stamp duty will be computed at the rate of 0.005% on an inclusive method basis. For instance: If the transaction amount is Rs. 100100 /- and the transaction charge is Rs. 100, the stamp duty will be calculated as follows: $((\text{Transaction Amount} - \text{Transaction Charge})/100.005 * 0.005) = \text{Rs. } 5$. If the applicable Net Asset Value (NAV) is Rs. 10 per unit, then units allotted will be calculated as follows: $(\text{Transaction Amount} - \text{Transaction Charge} - \text{Stamp Duty})/ \text{Applicable NAV} = 9,999.50$ units. Transfer of mutual fund units (such as transfers between demat accounts) are subject to payment of stamp duty @ 0.015%. The rate and levy of stamp duty may vary as amended from time to time.

- **Foreign Account Tax Compliance Act (FATCA):**

The Foreign Account Tax Compliance Act (FATCA) is a United States Federal Law, aimed at prevention of tax evasion by US taxpayers through use of offshore accounts. The Government of India and the United States of America (US) have reached an agreement in substance on the terms of an Inter-Governmental Agreement (IGA) to implement FATCA. In case the portfolio of schemes is not rebalanced within the aforementioned mandated plus extended timelines, AMCs shall:

- i. not be permitted to launch any new scheme till the time the portfolio is rebalanced.
- ii. not to levy exit load, if any, on the investors exiting such scheme(s).

The price and yield on various debt instruments fluctuate from time to time depending upon the macro - economic situation, inflation rate, overall liquidity position, foreign exchange scenario etc. Also, the price and yield vary according to maturity profile, credit risk etc.

Generally, for instruments issued by a non-Government entity (corporate / PSU bonds), the yield is higher than the yield on a Government Security with corresponding maturity. The difference, known as credit spread, depends on the credit rating of the entity.

Apart from these, there are some other options available for short tenure investments that include MIBOR linked debentures with periodic exit options and other such instruments.

Investment / Risk Mitigation Strategy

i) Risk profile of securitised debt vis-à-vis risk appetite of the Scheme

Securitized debt is a form of conversion of normally non-tradable loans to transferable securities. This is done by assigning the loans to a special purpose vehicle (a trust), which in turn issues Pass Through Certificates (PTCs). These PTCs are transferable securities with fixed income characteristics. The risk of investing in securitized debt is similar to investing in debt securities. However, it differs in two respects.

- a. Typically, the liquidity of securitized debt is less than similar debt securities.
- b. For certain types of securitized debt (backed by mortgages, personal loans, credit card debt, etc.), there is an additional pre-payment risk. Pre-payment risk refers to the possibility that loans are repaid before they are due, which may reduce returns if the re-investment rates are lower than initially envisaged.

Because of these additional risks, securitized debt typically offers higher yields than debt securities of similar credit rating and maturity. If the fund manager judges that the additional risks are suitably compensated by the higher returns, he may invest in securitized debt up to the limits specified in the asset allocation.

ii) Policy relating to originators based on nature of originator, track record, NPAs, losses in earlier securitised debt, etc.

The originator is an entity (like banks, non-banking finance companies, corporates etc), which has initially provided the loan & is also generally responsible for servicing the loans. The schemes will invest in securitised debt of originators with at least investment grade credit rating and established track record. A detailed evaluation of originator is done before the investment is made in securitised debt of any originator on various parameters given below:

Track record

The investment in securitised debt is done based on origination and underwriting process and capabilities of the originator, overview of corporate structure, group to which they belong, experience of the company in the business, how long they have been in the business, financial condition of the company, credit rating, past performance of similar pools by the originator, etc.

Willingness to pay through credit enhancement facilities etc.

Credit enhancement is provided by the originator, as indicated by rating agencies, so as to adequately cover the defaults and acts as a risk mitigation measure. The size of the credit enhancement as indicated by rating agency depends on the originator's track record, past delinquencies, pattern of the portfolio & characteristics of the pool vis-a-vis of the portfolio, nature of the asset class.

Ability to pay

The quality of the origination impacts the performance of the underlying asset & thus originators with strong systems and processes in place can eliminate poor quality assets. A robust risk management system of the originator and availability of MIS reports on a timely basis, results in creation of a strong asset portfolio.

Business Risk Assessment

The business risk assessment of originator / underlying borrower also includes detailed credit assessment wherein following factors are also considered:

- ★ Outlook for the economy (domestic and global)
- ★ Outlook for the industry
- ★ Company specific factors

Additionally, a detailed review of rating rationale is done along with interactions with the originator as well as the credit rating agency. All investment in securitised debt is done after taking into account points (with regard to originator) stated below:

- ★ Default track record/ frequent alteration of redemption conditions
- ★ High leverage ratios of the ultimate borrower both on a standalone basis as well on a consolidated level/ group level
- ★ Higher proportion of reschedulement of underlying assets of the pool or loan, as the case may be
- ★ Higher proportion of overdue assets of the pool or the underlying loan, as the case may be.
- ★ Poor reputation in market
- ★ Insufficient track record of servicing of the pool or the loan, as the case may be.

iii)Risk mitigation strategies for investments with each kind of originator

Investments are based on assessment of following parameters, to mitigate risk associated with such investment:

- a. Credit quality, size and reach of the originator
- b. Nature of receivables/asset category i.e. cars, commercial vehicles, personal loans etc.
- c. Collection process, infrastructure and follow-up mechanism
- d. Quality of MIS
- e. Credit cum liquidity enhancement
- f. Credit appraisal norms of originator
- g. Asset Quality - portfolio delinquency levels
- h. Past performance of rated pools
- i. Pool Characteristics - seasoning, Loan-to-value ratios, geographic diversity etc.

iv)Minimum retention percentage by originator of debts to be securitised

While minimum retention percentage by originator is not prescribed, any amount retained by the originator through subordination is viewed positively at the time of making investment & generally varies from 5% to 10%.

v)The mechanism to tackle conflict of interest when the mutual fund invests in securitised debt of an originator and the originator in turn makes investments in that particular scheme of the fund.

All proposals for investment in securitised debt are evaluated by the analyst based on several parameters such as nature of underlying asset category, pool characteristics, asset quality, credit rating of the securitisation transaction, and credit cum liquidity enhancement available. Investment in securitised debt by the scheme is made by the fund manager in line with the investment objective of the scheme.

vi) Minimum retention period of the debt by originator prior to securitization

Issuance of securitized debt is governed by the Reserve Bank of India. RBI norms cover the "true sale" criteria including credit enhancement and liquidity enhancements. In addition, RBI has proposed minimum holding period before they can be securitized. The minimum holding period depends on the tenor of the securitization transaction. The Fund will invest in securitized debt that are compliant with the laws and regulations.

Note: The information contained herein is based on current market conditions and may change from time to time based on changes in such conditions, regulatory changes and other relevant factors. Accordingly, our investment strategy, risk mitigation measures and other information contained herein may change in response to the same.

Investment in debt instruments shall generally have a low risk profile and those in money market instruments shall have an even lower risk profile. The maturity profile of debt instruments will be selected in accordance with the AMC's view regarding current market conditions, interest rate outlook and the stability of ratings.

vii) The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments.

Diversification of underlying assets is achieved through a) prudent mix of asset categories - i.e. cars (new, used), commercial vehicles, construction equipment, unsecured loans to individuals or small & medium enterprises b) total number of contracts in a pool c) average ticket size of loans and d) geographical distribution.

Risk mitigation measures for less diversified investments in pools is accomplished through the size of credit enhancement, seasoning or loan to value ratios.

Illustrative framework, which will be applied while evaluating investment decision relating to a pool securitisation transaction:

Characteristics /Type of Pool	Mortgage Loan	Commercial Vehicle and Construction Equipment	Car	Two Wheelers	Micro Finance Pools	Personal Loans	Single Sell Downs	Others
Approximate Average Maturity (In Months)	NA	12-60 months	12-60 months	8-40 months	NA	NA	Refer Note A	Refer Note B

Average seasoning of the pool	NA	3- 8 months	3- 8 months	2-5 months	NA	NA		
Maximum single exposure range	NA	3-7%	NA (Retail Pool)	NA (Retail Pool)	NA	NA		

Average single exposure range %	NA	1-5%	0-1%	0-1%	NA	NA

Information in the table above is based on current scenario and is subject to change depending upon the change in related factors. Illustrative framework, which will be applied while evaluating investment decision relating to a pool securitization transaction:
NA - Not Applicable

Notes:

A. In case of securitization involving single loans or a small pool of loans, the credit risk of the borrower is analyzed. The investment limits applicable to the underlying borrower are applied to the single loan sell-down.

B. Other investment will be decided on a case to case basis.

In case of asset backed pools (ABS), evaluation of the pool assets is done considering the following factors: (Refer the table above which illustrates the averages of parameters considered while selecting the pool)

- Size of the loan
- Average original maturity of the pool
- Loan to Value Ratio
- Average seasoning of the pool
- Default rate distribution
- Geographical Distribution
- Credit enhancement facility
- Liquid facility
- Structure of the pool

18. When issued security- When, as and if issued' (commonly known as "when-issued" (WI) security) refers to a security that has been authorized for issuance but not yet actually issued. WI trading takes place between the time a new issue is announced and the time it is actually issued. All "when issued" transactions are on an "if" basis, to be settled if and when the actual security is issued.

SEBI has on April 16, 2008 in principle allowed Mutual Funds to undertake 'When Issued (WI)' transactions in Central Government securities, at par with other market participants.

Open Position in the 'WI' market are subject to the following limits:

Category	Reissued Security	Newly Issued Security
Non-PDs	Long Position, not exceeding 5 percent of the notified amount.	Long Position, not exceeding 5 percent of the notified amount.

The Scheme may invest, if and to the extent permissible under the Regulations in derivative instruments

19. Trading in Derivatives-

Equity Derivatives like Futures and Options as described below:

Futures:

Futures are exchange-traded contracts to sell or buy financial instruments for future delivery at an agreed price. There is an agreement to buy or sell a specified quantity of financial instrument on a designated future date at a price agreed upon by the buyer and seller at the time of entering into a contract. To make trading possible, the exchange specifies certain standardized features of the contract. A futures contract involves an obligation on both the parties to fulfill the terms of the contract.

SEBI has permitted futures contracts on indices and individual stocks with maturity of 1 month, 2 months and 3 months on a rolling basis. The futures contracts are settled on last Thursday (or immediately preceding trading day if Thursday is a trading holiday) of each month. Currently, the futures are settled in cash and in physical for some of the securities, the final settlement price is the closing price of the underlying stock(s)/index.

Options:

Option is a contract which provides the buyer of the option (also called holder) the right, without the obligation, to buy or sell a specified asset at the agreed price on or upto a particular date. For acquiring this privilege, the buyer pays premium (fee) to the seller. The seller on the other hand has the obligation to buy or sell specified asset at the agreed price and for this obligation he receives premium. The premium is determined considering number of factors such as the market price of the underlying asset/security, number of days to expiry, risk free rate of return, strike price of the option and the volatility of the underlying asset. Option contracts are of two types viz:

Call Option - The option that gives the buyer the right but not the obligation to buy specified quantity of the underlying asset at the strike price is a call option. The buyer of the call option (known as the holder of call option) can call upon the seller of the option (writer of the option) and buy from him the underlying asset at the agreed price at any time on or before the expiry of the option.

The seller (writer of the option) on the other hand has the obligation to sell the underlying asset if the buyer of the call option decides to exercise his option to buy.

Put Option - The option that gives the buyer the right but not the obligation to sell is called put option. A Put option gives the holder (buyer) the right to sell specified quantity of the underlying asset at the strike price. The seller of the put option (one who is short Put) however, has the obligation to buy the underlying asset at the strike price if the buyer decides to exercise his option to sell.

There are two kind of options based on the date of exercise of right. The first is the European Option which can be exercised only on the maturity date. The second is the American Option which can be exercised on or before the maturity date.

Debt Derivative instruments like Interest Rate Swaps, Forward Rate Agreements and such other derivative instruments permitted by SEBI/RBI.

Interest Rate Swap - An Interest Rate Swap ("IRS") is a financial contract between two parties exchanging or swapping a stream of interest payments for a "notional principal" amount on multiple occasions during a specified period. Such contracts generally involve exchange of a "fixed to floating" or "floating to fixed" rate of interest. Accordingly, on each payment date that occurs during the swap period, cash payments based on fixed/ floating and floating rates are made by the parties to one another.

Forward Rate Agreement - A Forward Rate Agreement ("FRA") is a financial contract between two parties to exchange interest payments for a notional principal amount on settlement date, for a specified period from start date to maturity date. Accordingly, on the settlement date, cash payments based on contract (fixed) and the settlement rate, are made by the parties to one another. The settlement rate is the agreed benchmark/ reference rate prevailing on the settlement date.

Interest Rate Futures:

A futures contract is a standardized, legally binding agreement to buy or sell a commodity or a financial instrument in a designated future month at a market determined price (the futures price) by the buyer and seller. The contracts are traded on a futures exchange. An Interest Rate Future is a futures contract with an interest-bearing instrument as the underlying asset.

Characteristics of Interest Rate Futures

1. Obligation to buy or sell a bond at a future date.

2. Standardized contract.
3. Exchange traded
4. Physical/Cash settlement.
5. Daily mark to market.

The Scheme(s) may take derivatives position based on the opportunities available subject to the guidelines provided by SEBI from time to time and in line with the overall investment objective of the Scheme(s). The Fund has to comply with the prescribed disclosure requirements. These may be taken to hedge the portfolio, rebalance the same or to undertake any other strategy as permitted under SEBI (MF) Regulations from time to time. Hedging could be perfect or imperfect. Hedging does not mean maximisation of returns but only reduction of systematic or market risk inherent in the investment. The Scheme(s) intends to take position in derivative instruments like Futures, Options, Interest Rate Swaps, Forward Rate Agreements and such other derivative instruments as may be permitted by SEBI from time to time.

Mutual Funds may enter into plain vanilla Interest Rate Swaps (IRS) for hedging purposes. The value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme.

In case of participation in IRS is through over the counter transactions, the counter party has to be an entity recognized as a market maker by RBI and exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme. However, if mutual funds are transacting in IRS through an electronic trading platform offered by the Clearing Corporation of India Ltd. (CCIL) and CCIL is the central counterparty for such transactions guaranteeing settlement, the single counterparty limit of 10% shall not be applicable.

Exposure limits on Interest Rate Futures (IRF)

The exposure limits for trading in Interest Rate Futures (IRFs) by Mutual Funds specified by SEBI vide its Master Circular No. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2023/74 dated May 19, 2023 are as follows:

- ii. To reduce interest rate risk in a debt portfolio, mutual funds may hedge the portfolio or part of the portfolio (including one or more securities) on weighted average modified duration basis by using Interest Rate Futures (IRFs). The maximum extent of short position that may be taken in IRFs to hedge interest rate risk of the portfolio or part of the portfolio, is as per the formula given below:

$(\text{Portfolio Modified Duration} * \text{Market Value of the Portfolio}) / (\text{Futures Modified Duration} * \text{Futures Price/PAR})$

- iii. In case the IRF used for hedging the interest rate risk has different underlying security(s) than the existing position being hedged, it would result in imperfect hedging.
- iii. Imperfect hedging using IRFs may be considered to be exempted from the gross exposure, upto maximum of 20% of the net assets of the scheme, subject to the following:

- a) Exposure to IRFs is created only for hedging the interest rate risk based on the weighted average modified duration of the bond portfolio or part of the portfolio.
- b) Mutual Funds are permitted to resort to imperfect hedging, without it being considered under the gross exposure limits, if and only if, the correlation between the portfolio or part of the portfolio (excluding the hedged portions, if any) and the IRF is atleast 0.9 at the time of initiation of hedge. In case of any subsequent deviation from the correlation criteria, the same may be rebalanced within 5 working days and if not rebalanced within the timeline, the derivative positions created for hedging shall be considered under the gross exposure computed in terms of SEBI Master circular dated May 19, 2023. The correlation should be calculated for a period of last 90 days.

Explanation: If the fund manager intends to do imperfect hedging upto 15% of the portfolio using IRFs on weighted average modified duration basis, either of the following conditions need to be complied with:

- i. The correlation for past 90 days between the portfolio and the IRF is at least 0.9 or
- ii. The correlation for past 90 days between the part of the portfolio (excluding the hedged portions, if any) i.e. at least 15% of the net asset of the scheme (including one or more securities) and the IRF is at least 0.9.

- c) At no point of time, the net modified duration of part of the portfolio being hedged should be negative.
- d) The portion of imperfect hedging in excess of 20% of the net assets of the scheme should be considered as creating exposure and shall be included in the computation of gross exposure in terms of SEBI Master circular dated May 19, 2023.

20. Covered Call Options - A call option gives the holder (buyer) the right but not the obligation to buy an asset by a certain date for a certain price. Covered calls are an options strategy where a person holds a long position in an asset and writes (sells) call options on that same asset.

Benefits of using Covered Call strategy in Mutual Funds:

The covered call strategy can be followed by the Fund Manager in order to hedge risk thereby resulting in better risk adjusted returns of the Scheme. The strategy offers the following benefits:

- a) Down side protection to the extent of premium collected - Since the fund manager sells a call option on a stock already owned by the mutual fund scheme, the downside from fall in the stock price would be lower to the extent of the premium earned from the call option.
- b) Generating additional returns in the form of option premium in a range bound market.

Thus, a covered call strategy involves gains for unit holders in case the strategy plays out in the right direction.

Illustration — Covered Call strategy using stock call options:

A fund manager buys equity stock of ABC Ltd. for Rs. 1000 and simultaneously sells a call option on the same stock at a strike price of Rs. 1100. Further, it is assumed that the scheme has earned a premium of Rs. 50 and the fund manager is of the opinion that the stock price will not exceed Rs. 1100, during the expiry period of the option.

Scenario 1: Stock price exceeds Rs. 1100

The call option will get exercised and the fund manager will sell the stock to settle his obligation on the call at Rs. 1100 (earning a return of 10% on the stock purchase price). Also, since the scheme has earned a premium of Rs. 50, this has reduced the purchase cost of the stock (Rs. 1000 — Rs. 50 = Rs. 950).

Hence, the Net Gain = Rs. 150 (Rs 100 stock appreciation + Rs 50 call option premium)

(However, please note that in a scenario where the stock price reaches Rs. 1300, investment in long only *equity* would be more beneficial than a covered call strategy as the net gain under the covered call strategy would be Rs. 150, against a net gain of Rs. 300 under a pure long only equity strategy.)

Scenario 2: Stock prices stays below Rs. 1100

The call option will not get exercised and will expire worthless. The premium earned on call option will generate alpha for the scheme.

Hence, the Net Gain = Rs. 50.

21. Investment in units of Real Estate Investment Trust ('REIT') & Infrastructure Investment Trust ('InvIT') subject to following

- a. No mutual fund under all its schemes shall own more than 10% of units issued by a single issuer of REIT and InvIT; and
- b. A mutual fund scheme shall not invest –
 - i. more than 10% of its NAV in the units of REIT and InvIT; and
 - ii. more than 5% of its NAV in the units of REIT and InvIT issued by a single issuer

Provided that the limits mentioned in (i) and (ii) above shall not be applicable for investments in case of index fund or sector or industry specific scheme pertaining to REIT and InvIT.

22. The Scheme may invest in Non-Convertible Preference Shares (NCPS).

23. Any other like instruments as may be permitted by RBI / SEBI / such other Regulatory Authority from time to time subject to approvals required, if any.

Further investments in debentures, bonds and other fixed income securities will be in instruments which have been assigned investment grade rating by the Credit Rating Agency.

Investment in unrated debt instruments shall be subject to complying with the provisions of the Regulations and within the limit as specified in Schedule VII to the Regulations. Pursuant to SEBI Master circular no. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2023/74 dated May 19, 2023, the AMC may constitute committee(s) to approve proposals for investments in unrated debt instruments. The AMC Board and the Trustee shall approve the detailed parameters for such investments. However, in case any unrated debt security does not fall under the parameters, the prior approval of Board of AMC and Trustee shall be sought.

For applicable regulatory investment limits please refer paragraph "Investment Restrictions". Details of various derivative strategies/examples of use of derivatives have been provided under the section "Strategies for Investment in Derivatives".

The Fund Manager reserves the right to invest in such securities as maybe permitted from time to time and which are in line with the investment objectives of the Scheme.

E. WHAT ARE THE INVESTMENT STRATEGIES?

INVESTMENT STRATEGIES

The total assets of the Scheme will be invested primarily in Debt and Money market instruments. The Scheme seeks to generate regular income through investments predominantly in debt and money market instruments. The Scheme also seeks to generate long term capital appreciation from the portion of equity investments under the scheme. The aim of equity strategy will be to build a portfolio of companies diversified across major industries, economic sectors and market capitalization that offer an acceptable risk reward balance.

The Scheme will retain the flexibility to invest in the entire range of debt securities (including securitised debt) and money market instruments. Investment in Debt securities and Money Market Instruments will be as per the limits in the asset allocation table of the Scheme, subject to permissible limits laid under SEBI (MF) Regulations. Investment in debt securities will be guided by credit quality, liquidity, interest rates and their outlook. The Scheme may also invest in the hybrid securities viz. Units of REITs and InvITs for diversification and subject to necessary stipulations by SEBI from time to time.

Subject to the Regulations and the applicable guidelines, the Scheme may engage in Stock Lending activities.

The Scheme may also invest in the schemes of Mutual Funds.

The fund manager will seek to play out the yield curve and exploit anomalies if any in portfolio construction after analysing the macro-economic environment including future course of system liquidity, interest rates and inflation along with other considerations in the economy and markets.

The investment team of the AMC will, as a mitigation and risk control procedure, carry out rigorous credit evaluation of the issuer company proposed to be invested in. The credit evaluation will analyse the operating environment of the issuer, business model, management, governance practices, quality of the financials, the past track record as well as the future prospects of the issuer and the financial health of the issuer.

Though every endeavour will be made to achieve the objectives of the Scheme, the AMC/Sponsor/Trustees do not guarantee that the investment objectives of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme.

Risk Control

Risk is an inherent part of the investment function. Effective risk management is critical to fund management for achieving financial soundness. Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process. The risk control process involves reducing risks through portfolio diversification; The AMC believes that this diversification would help achieve the desired level of consistency in returns. The AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. With the aim of controlling risks, rigorous in-depth credit evaluation of the securities proposed to be invested in will be carried out by the investment team of the AMC. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. AMC has implemented the MFUND Plus Software as Front Office System (FOS) for this purpose. The system has incorporated all the investment restrictions as per SEBI guidelines and "soft" warning alerts at appropriate levels for preemptive monitoring.

Credit Evaluation Policy

The credit evaluation policy of the AMC involves evaluation of credit fundamentals of each investment opportunity. Some of the factors that are evaluated inter-alia may include outlook on the sector, parentage, quality of management, and overall financial strength of the credit. The AMC utilises ratings of recognised rating agencies as an input in the credit evaluation process. Investments in bonds and debenture are usually in instruments that have been assigned high investment grade ratings by a recognized rating agency.

In accordance with SEBI Master circular no. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2023/74 dated May 19, 2023, the AMC may constitute committee(s) to approve proposals for investments in unrated instruments. The AMC Board and the Trustee shall approve the detailed parameters for such investments. The details of such investments would be communicated by the AMC to the Trustee in their periodical reports. It would also be clearly mentioned in the reports, how the parameters have been complied with. However, in case any security does not fall under the parameters, the prior approval of Board of AMC and Trustee shall be sought.

Strategies for Investment in Derivatives

The Scheme may use Derivative instruments like interest rate swaps, Overnight Indexed Swaps ("OIS"), forward rate agreements, interest rate futures (as and when permitted) or such other Derivative instruments as may be permitted under the applicable regulations. Derivatives will be used for the purpose of hedging, and portfolio balancing or such other purpose as may be permitted under the regulations and Guidelines from time to time.

The Fund will be allowed to take exposure in interest rate swaps only on a non-leveraged basis. A swap will be undertaken only if there is an underlying asset in the portfolio. In terms of Circular No. MFD.BC.191/07.01.279/1999-2000 and MPD.BC.187/07.01.279/1999-2000 dated November 1, 1999 and July 7, 1999 respectively issued by RBI permitting participation by Mutual Funds in interest rate swaps and forward rate agreements, the Fund will use Derivative instruments for the purpose of hedging and portfolio balancing. The Fund may also use derivatives for such purposes as maybe permitted from time to time. Further, the guidelines issued by RBI from time to time for forward rate agreements and interest rate swaps and other derivative products would be adhered to by the Mutual Fund.

IRS and FRA do also have inherent credit and settlement risks. However, these risks are substantially reduced as they are limited to the interest streams and not the notional principal amounts.

Investments in Derivatives will be in accordance with the extant Regulations / guidelines. Presently, Derivatives shall be used for hedging and / or portfolio balancing purposes, as permitted under the Regulations. The circumstances under which such transactions would be entered into would be when, for example using the IRS route it is possible to generate better returns / meet the objective of the Scheme at a lower cost. e.g. if buying a 2 Yr FBIL MIBOR based instrument and receiving the 2 Yr swap rate yields better return than the 2 Yr AAA corporate, the Scheme would

endeavour to do that. Alternatively, the Scheme would also look to hedge existing fixed rate positions if the view on interest rates is that it would likely rise in the future.

The following information provides a basic idea as to the nature of the Derivative instruments proposed to be used by the Fund and the benefits and risks attached therewith. Please note that the examples have been given for illustration purposes only.

Interest Rate Swaps (IRS)

The Indian markets have faced high volatility in debt markets. An interest rate swap is a contractual agreement between two counterparties to exchange streams of interest amount on a notional principal basis. In this, one party agrees to pay a fixed stream of interest amount against receiving a variable or floating stream of interest amount. The variable or floating part is determined on a periodical basis.

Mutual Funds may enter into plain vanilla interest rate swaps for hedging purposes. The counterparty in such transactions has to be an entity recognized as a market maker by RBI. Further, the value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme.

Example

Entity A has a Rs.50 crores, 3-month asset which is being funded through call. Entity B, on the other hand, has deployed in overnight call money market Rs.50 crores, 3-month liability. Both the entities are taking on an interest rate risk.

To hedge against the interest rate risk, both the entities can enter into a 3-month swap agreement based on say FBIL MIBOR (Financial Benchmarks India Private Limited , Mumbai Interbank Offered Rate). Through this swap, entity B will receive a fixed pre-agreed rate (say 7%) and pay FBIL MIBOR ("the benchmark rate") which will neutralize the interest rate risk of lending in call. Similarly, entity A will neutralize its interest rate risk from call borrowing as it will pay 8% and receive interest at the benchmark rate.

Assuming the swap is for Rs.50 crores 1 January to 1 April, Entity A is a floating rate receiver at the overnight compounded rate and Entity B is a fixed rate receiver. On a daily basis, the benchmark rate fixed by NSE will be tracked by them.

On April 1, they will calculate as explained below:

Entity A is entitled to receive daily compounded call rate for 91 days and pay 7% fixed.

Entity B is entitled to receive interest on Rs.50 crores @ 7% i.e. Rs. 87.26 lakhs, and pay the compounded benchmark rate.

Thus on December 1, if the total interest on the daily overnight compounded benchmark rate is higher than Rs. 87.26 lakhs, entity B will pay entity A the difference and vice versa.

The above example illustrates the use of Derivatives for hedging and optimizing the investment portfolio. Swaps have their own drawbacks like credit risk, settlement risk. However, these risks are substantially reduced as the amount involved is interest streams and not principal.

Forward Rate Agreements (FRA)

A FRA is referred to by the beginning and end dates of the period covered in the transaction. A 2x5 FRA means the 3 month rate starting 2 months from now.

For example, a corporate has a three month fixed liability three months from now. To meet this liability the company enters into a 3x6 FRA where it receives 7.25% for 100 crore and fixes the interest cost for the 3-6 months period. If the actual three month rate three months from now is 7% the corporate has gained 25 bps through interest cost. As the settlement is done at the beginning of the period, the net present value of the savings needs to be calculated using the 3 month rate as the discount rate.

Interest savings = INR 100 crores * 25 bps * 92/365 (assuming 92 days in the 3 month period and 365 days for the year) = INR 6,30,137/-
Settlement Amount = INR 6,30,137 / (1+ 7%*92/365) = INR 6,19,212/-

Interest Rate Futures:

Assume that ABC hold GOI securities, hence is exposed to the risk of rising interest rates, which in turn results in the reduction in the value of their portfolio. So in order to protect against a fall in the value of their portfolio due to falling bond prices, they can take short position in IRF contracts.

Example:

Date: 15-12-2022

Spot price of GOI Security: Rs 100.05

Futures price of IRF Contract: Rs 100.12

On 15-12-2022 ABC bought 2000 GOI securities from spot market at Rs 100.05. He anticipates that the interest rate will rise in near future. Therefore, to hedge the exposure in underlying market he may sell December 2022 Interest Rate Futures contracts at Rs. 100.12.

On 30-12-2022 due to increase in interest rate:

Spot price of GOI Security: Rs 99.24

Futures Price of IRF Contract: Rs 99.28

Loss in underlying market will be $(99.24 - 100.05) * 2000 = \text{Rs. } 1620/-$

Profit in the Futures market will be $(99.28 - 100.12) * 2000 = \text{Rs. } 1680/-$

Imperfect Hedging using IRF

IRF can be taken at portfolio level to reduce the interest rate risk of the portfolio or part of the portfolio (including one or more securities). However, in case the IRF used for hedging the interest rate risk has different underlying security(s) than the existing position being hedged, it would result in imperfect hedging ie basis risk. In order to reduce the basis risk for the portfolio hedging strategy, the correlation between the portfolio or part of the portfolio (excluding the hedged portions, if any) and the IRF would be atleast 0.9 at the time of initiation of hedge. The correlation should be calculated for a period of last 90 days. Additionally, Imperfect hedging using IRFs would be restricted upto maximum of 20% of the total assets of the scheme.

Example:

Date: 15/06/2022

Total Assets of the Scheme: Rs. 100 cr

Modified Duration of the Scheme: 4.75

August 2022 Future Price of IRF contract of 6.79 GOI 2030: 103.24

Modified Duration of 6.79 GOI 2030: 7.13

Correlation between IRF and Portfolio during last 90 days: 0.95

On 15/06/2022, the fund manager anticipates that the interest rates will rise in near future. Therefore, to hedge the exposures of the portfolio he sells 19,00,000 IRF contracts of August 2022 6.79 GOI 2030 at 103.24. Thus, the value of Futures contract is Rs. 19.62 cr, which is less than 20% of Scheme value.

On 15/07/2022, due to interest rate increase by 5 basis points the values of securities in the portfolio reduced to Rs. 99.76 cr and the price of IRF contract for August 2022 6.79 GOI 2030 reduced to Rs. 102.88 . This resulted in loss in the value of the securities of Rs. 0.24 cr (Rs. 100 cr - Rs. 99.76 cr) and profit in the futures position of Rs. 0.07 cr $\{(103.24 - 102.88) * 19,00,000\}$

Given that there was imperfect correlation between portfolio and the IRF (ie basis risk) as well as cap on the maximum portfolio hedging allowed as per extant regulation, the loss in the value of portfolio was not completely matched by the gain from the IRF contract. Nevertheless, the fund manager was able to protect the value of the portfolio, to an extent, using the IRF contract. The loss on proportionate basis (ie ~20% of portfolio) would have been only Rs. 0.05 cr as against gain of Rs. 0.07 cr of gain from IRF.

Certain risks are inherent to Derivative strategies viz. lack of opportunities, inability of Derivatives to correlate perfectly with the underlying and execution risks, whereby the rate seen on the screen may not be the rate at which the

transaction is executed. For details of risk factors relating to use of Derivatives, the investors are advised to refer to Scheme Specific Risk Factors.

Risk Factors of SWAP/ Forward Rate Agreement/ Interest Rate Futures

- **Credit Risk:** This is the risk of defaults by the counterparty. This is usually negligible, as there is no exchange of principal amounts in a derivative transaction.
- **Market Risk:** Market movements may adversely affect the pricing and settlement derivatives.
- **Liquidity Risk:** The risk that a derivative cannot be sold or purchased quickly enough at a fair price, due to lack of liquidity in the market.
- **Additional Risk viz. Basis Risk** associated with imperfect hedging using Interest Rate Futures (IRF): The imperfect correlation between the prices of securities in the portfolio and the IRF contract used to hedge part of the portfolio leads to basis risk. Thus, the loss on the portfolio may not exactly match the gain from the hedge position entered using the IRF.

PORTFOLIO TURNOVER

The Scheme being an open-ended scheme, it is expected that there would be a number of subscriptions and redemptions on a daily basis. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio. There may be an increase in transaction cost such as brokerage paid, if trading is done frequently. However, the cost would be negligible as compared to the total expenses of the Scheme. Frequent trading may increase the profits which will offset the increase in costs. The fund manager will endeavor to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. However, it is difficult to estimate with reasonable accuracy, the likely turnover in the portfolio of the Scheme. The Scheme has no specific target relating to portfolio turnover.

Right to Limit Redemption

Subject to the approval of Board of Director of the AMC and Trustee Company and immediate intimation to SEBI, a restriction on redemptions may be imposed by the Scheme when there are circumstances, which the AMC / Trustee believe that may lead to a systemic crisis or event that constrict liquidity of most securities or the efficient functioning of markets suchas:

1.Liquidity issues - when market at large becomes illiquid affecting almost all securities rather than any issuer specific security.

2.Market failures, exchange closures - when markets are affected by unexpected events which impact the functioning of exchanges or the regular course of transactions. Such unexpected events could also be related to political, economic, military, monetary or other emergencies.

3.Operational issues – when exceptional circumstances are caused by force majeure, unpredictable operational problems and technical failures (e.g. a black out). Such cases can only be considered if they are reasonably unpredictable and occur in spite of appropriate diligence of third parties, adequate and effective disaster recovery procedures and systems.

Such restriction on redemption may be imposed for a specified period of time not exceeding 10 working days in any 90 days period. However, if exceptional circumstances / systemic crisis referred above continues beyond the expected timelines, the restriction may be extended further subject to the prior approval of Board of Directors of the AMC and Trustee Company giving details of circumstances and justification for seeking such extension shall also be informed to SEBI in advance.

Procedure to be followed while imposing restriction on redemptions:

- a. No redemption requests upto INR 2 lacs per request shall be subject to such restriction;
- b. Where redemption requests are above INR 2 lacs:
 - . The AMC shall redeem the first INR 2 lacs of each redemption request, without such restriction;

	<ul style="list-style-type: none"> . Remaining part over and above INR 2 lacs shall be subject to such restriction and be dealt as under: . Any Units which are not redeemed on a particular Business Day will be carried forward for Redemption to the next Business Day, in order of receipt. . Redemptions so carried forward will be priced on the basis of the Applicable NAV (subject to the prevailing Load, if any) of the subsequent Business Day(s) on which redemptions are being processed. . Under such circumstances, to the extent multiple redemption requests are received at the same time on a single Business Day, redemptions will be made on a pro rata basis based on the size of each redemption request, the balance amount being carried forward for redemption to the next Business Day.
<p>Transaction Charges (applicable for both existing and new investors)</p>	<p>In accordance with SEBI Master circular no. <p>Cut off timing for subscriptions/redemptions</p> <p>This is the time before which your application (complete in all respects) should reach the Official points of Acceptance</p>	<p>Subscriptions/Purchases including Switch – ins for any amount.</p> <ul style="list-style-type: none"> • In respect of valid applications received for any amount upto 3.00 p.m. on a Business Day at the Official Point(s) of Acceptance and where the funds for the entire amount of subscription / purchase as per the application / switch-in request, are credited to the bank account of the Scheme before the cut-off time i.e. available for utilization before the cut-off time - the closing NAV of the day on which application is received shall be applicable. • In respect of valid applications received for any amount after 3.00 p.m. on a Business Day at the Official Point(s) of Acceptance and where the funds for the entire amount of subscription / purchase as per the application / switch-in request, are credited

to the bank account of the Scheme before the cut-off time of the next Business Day i.e. available for utilization before the cut-off time of the next Business Day - the closing NAV of the next Business Day shall be applicable.

- Irrespective of the time of receipt of application, where the funds for the entire amount are credited to the bank account of the Scheme before the cut-off time on any subsequent Business Day i.e. available for utilization before the cut-off time on any subsequent Business Day - the closing NAV of such subsequent Business Day shall be applicable.

For Switch-ins of any amount:

For determining the applicable NAV, the following shall be ensured:

- Application for switch-in is received before the applicable cut-off time.
- Funds for the entire amount of subscription/purchase as per the switch in request are credited to the bank account of the Scheme before the cut-off time.
- The funds are available for utilization before the cut-off time.
- In case of 'switch' transactions from one scheme to another, the allocation shall be in line with redemption payouts.

In case of switches, the request should be received on a day which is a Business Day for the Switch-out scheme. Redemption for switch-out shall be processed at the applicable NAV as per cut-off timing. Switchin will be processed at the Applicable NAV (on a Business Day) based on realization of funds as per the redemption pay-out cycle for the switch-out scheme.

For investments through systematic investment routes such as Systematic Investment Plans (SIP), Systematic Transfer Plans (STP), etc. the units will be allotted as per the closing NAV of the day on which the funds are available for utilization within applicable cut-off time by the Target Scheme irrespective of the installment date of the SIP, STP or record date of IDCW etc.

While the AMC will endeavour to deposit the payment instruments accompanying investment application submitted to it with its bank expeditiously, it shall not be liable for delay in realization of funds on account of factors beyond its control such as clearing / settlement cycles of the banks.

Since different payment modes have different settlement cycles including electronic transactions (as per arrangements with Payment Aggregators / Banks / Exchanges etc), it may happen that the investor's account is debited, but the money is not credited within cut-off time on the same date to the Scheme's bank account, leading to a gap / delay in Unit allotment. Investors are therefore urged to use the most efficient electronic payment modes to avoid delays in realization of funds and consequently in Unit allotment.

Redemptions including switch-out:

The following cut-off timings shall be observed by the Mutual Fund in respect of Repurchase of Units:

1. Where the valid application is received up to 3.00 p.m. on a business day by the Mutual Fund- the closing NAV of the day on which application is received shall be applicable and

2. Where the valid application is received after 3.00 p.m. on a business day by the Mutual Fund- the closing NAV of the next business day shall be applicable.

The above mentioned cut off timing shall be applicable to transactions through the online trading platform. The Date of Acceptance will be reckoned as per the date & time; the transaction is entered in stock exchanges infrastructure for which a system generated confirmation slip will be issued to the unitholder.

Investors shall make sure that after deducting bank charges for outstation cheque amount available for investment shall not be less than amount specified for minimum investment.

Transactions through online facilities / electronic modes:

The time of transaction done through various online facilities / electronic modes offered by the AMC, for the purpose of determining the applicability of NAV, would be the time when the request for purchase / sale / switch of units is received in the servers of AMC/RTA.

In case of transactions through online facilities / electronic modes, there may be a time lag of upto 5-7 banking days between the amount of subscription being debited to the investor's bank account and the subsequent credit into the respective Scheme's bank account. This lag may impact the applicability of NAV for transactions where NAV is to be applied, based on actual realization of funds by the Scheme. Under no circumstances will PPFAS Asset Management Private Limited or its bankers or its service providers be liable for any lag / delay in realization of funds and consequent pricing of units.

The AMC has the right to amend cut off timings subject to SEBI (MF) Regulations for the smooth and efficient functioning of the Scheme.

Thus, an investor can progressively start increasing the</p>	

amount invested, allowing them to gradually increase the investment corpus in a systematic manner. The salient features of this facility are as follows:

1. New investors can opt for it at the time of initiating the SIP. Existing unitholders can opt for it at the time of SIP renewal.

2. Investor can opt for an amount-based Cap whereby they can choose the amount from which the top-ups will cease (even though the SIP will continue at this final amount till the expiry date). In case the top-up amount-based cap is not chosen, the top-up will occur at the chosen frequency (half-yearly /yearly) until the SIP expiry date (Please refer to illustrations 1 - A and 2 - A below)

3. The amount of each such SIP installment cannot exceed the Daily One Time Mandate (OTM) limit for purchases in scheme(s) of PPFAS Mutual Fund from all modes (lump sum as well as SIP). In case of any conflict, such SIP installment will have precedence over any lump sum purchases undertaken on that day. Any lumpsum purchase exceeding the OTM limit will be reversed within three working days of the relevant intimation received from the unitholder's bank.

4. Minimum Top-up Amount for the said facility will be Rs. 500/- & in multiple of Re. 1/- thereafter. Forms where a specific amount is not clearly mentioned are liable to be rejected.

5. Frequency for the Top up facility: Investors can choose either 'Half-Yearly' or 'Yearly' Top-Up increments under Monthly and Quarterly SIP options. In case SIP Top-Up frequency is not mentioned, the default frequency will be considered as 'Yearly' for monthly SIP.

6. The facility is available only for the investors who submit "NACH / One Time Mandate (OTM) Form" mentioning the 'Maximum Amount'. This will limit the total investment to the pre-determined 'maximum amount'.

7. Once the SIP Top-Up upper limit is reached, the Top-Up will be discontinued. However, the SIP will continue at this upper limit for the remaining SIP enrollment period (subject to it not exceeding the daily OTM limit). For further clarification, please refer the illustrations as mentioned below.

8. The initial investment under the SIP Top-UP will be subject to minimum SIP investment requirement applicable from time to time (As on date, this figure is Rs. 1000/-).

9. Once enrolled, the Top-up details cannot be modified. However, investors can choose to cancel the Top-Up, by filling in the relevant Form and continue with the same SIP.

10. For further details and Forms, investors are requested to refer the website (<http://amc.ppfas.com>) or contact the Corporate Office of PPFAS Mutual Fund.

11. The above terms apply for both, offline and online modes of application, as and when initiated by the Fund.

12. All the other provisions of the SID/KIM except as specifically modified herein above remain unchanged.

- on the balance of the assets 0.80% p.a.

** Minimum of 0.02% shall be allocated annually to investor education and awareness initiatives

It is possible that the AMC may charge the maximum recurring expenses provided above as investment management and advisory fees. In such case the other recurring expenses will not be charged to the Scheme.

In terms of SEBI Master circular no. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2023/74 dated May 19, 2023 , the AMC shall annually set apart at least 0.02% on daily net assets within the maximum limit of recurring expenses as per Regulation 52 for investor education and awareness initiatives.

In addition to the limits specified above as permitted under Regulation 52 (6A) of the SEBI Regulations, the following costs or expenses may be charged to the Scheme:

1. brokerage and transaction costs which are incurred for the purpose of execution of trade and included in the cost of investment, not exceeding 0.12% in case of cash market transactions and 0.05% in case of derivatives transactions;

In accordance with SEBI Master circular no. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2023/74 dated May 19, 2023 , any payment towards brokerage and transaction cost, over and above the said 0.12% and 0.05% for cash market transactions and derivatives transactions respectively, may be charged to the Scheme within the maximum limit of Total Expense Ratio (TER) as prescribed under Regulation 52 (6) of the SEBI (MF) Regulations, 1996.

2. expenses not exceeding of 0.30% of daily net assets, if the new inflows from beyond the top 30 cities are at least:
(i) 30 % of gross new inflows in the Scheme or;
(ii) 15 % of the average assets under management (year to date) of the Scheme,
whichever is higher:

As per SEBI Master circular no. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2023/74 dated May 19, 2023, additional expenses of 30 basis points, shall be charged based on inflows only from retail investors from beyond top 30 cities.

As per SEBI Master circular no. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2023/74 dated May 19, 2023 , inflows of amount upto Rs 2,00,000/- per transaction, by individual investors shall be considered as inflows from "retail investor".

In case inflows from such cities are less than the higher of (a) or (b) above, such expenses on daily net assets of the Scheme shall be charged on proportionate basis in accordance with SEBI Master circular no. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2023/74 dated May 19, 2023 .

Note: SEBI vide its letter no. SEBI/HO/IMD-SEC-3/P/OW/2023/5823/1 dated February 24, 2023 and AMFI letter dated No.35P/MEM-COR/85-a/2022-23 dated March 02, 2023 has directed AMCs to keep B-30 incentive structure in abeyance with effect from March 01, 2023 till further notice.

The amount so charged shall be utilised for distribution expenses incurred for bringing inflows from such cities. However, the amount incurred as expense on account of inflows from such cities shall be credited back to the Scheme in case the said inflows are redeemed within a period of one year from the date of investment.

Currently, SEBI has specified that the above additional expense may be charged for inflows from beyond 'Top 30 cities'. Top 30 cities shall mean top 30 cities based on Association of Mutual Funds in India (AMFI) data on 'AUM by Geography - Consolidated Data for Mutual Fund Industry' as at the end of the previous financial year.

3. Expenses not exceeding 0.05% p.a. of daily net assets towards Investment Management and Advisory Fees and the various sub-heads of recurring expenses mentioned under Regulation 52 (2) and (4) respectively of SEBI (MF) Regulations. However, in terms of SEBI Master circular no. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2023/74 dated May 19, 2023 , in case exit load is not levied / not applicable, the AMC shall not charge the said additional expenses.

The total expenses of the Scheme including the Investment Management and Advisory Fee shall not exceed the limits stated in Regulation 52 of the SEBI (MF) Regulations.

Further, any change in the base TER (i.e. TER excluding additional expenses provided in Regulation 52 (6A) (b) and 52 (6A) (c) of SEBI (Mutual Funds) Regulations, 1996) and Goods & Service Tax on investment and advisory fees in comparison to previous base TER charged to the Scheme/Plan shall be communicated to investors of the Scheme/Plan through notice via email or SMS and the notice of change in base TER will be uploaded on the website (<https://amc.ppfas.com/statutory-disclosures/total-expense-ratio-TER/>) at least three working days prior to effecting such change.

Illustration: Impact of Expense Ratio on Scheme's return:

Expense ratio, normally expressed as a percentage of Average Assets under Management, is calculated by dividing the permissible expenses under the Regulations by the average net assets.

To further illustrate the above, for the Scheme under reference, suppose an Investor invested ₹ 10,000/- under the Growth Option, the impact of expenses charged will be as under:

	Regular Plan			Direct Plan		
	Amount (₹)	Units	NAV (₹)	Amount (₹)	Units	NAV (₹)
Invested on March 31, 2019 (A)	10,000.00	1000	10.0000	10,000.00	1000	10.0000
Value of above investment as on March 31, 2020 (post all applicable expenses) (B)	10,648.53	1000	10.6485	10,698.52	1000	10.6985
Expenses charged during the year (other than Distribution Expenses/Commission) (C)	50.00			50.00		
Distribution Expenses/Commission charged during the year (D)	50.00			0.00		
Value of above investment as on March 31, 2018 (after adding back all expenses charged) (E) [E= B+C+D]	10,748.53	1000	10.7485	10,748.52	1000	10.7485
Returns (%) (post all applicable expenses) (F) [F= (B-A)/A]	6.49%			6.99%		
Returns (%) (without considering any expenses) (G) [G= (E-A)/A]	7.49%			7.49%		

Note(s):

- The purpose of the above illustration is purely to explain the impact of expense ratio charged to the Plan(s) under the Scheme and should not be construed as providing any kind of investment advice or guarantee of returns on investments.
- It is assumed that the expenses charged are evenly distributed throughout the year.
- The expenses of the Direct Plan of the Scheme will be lower to the extent of the distribution expenses/commission
- Any tax impact has not been considered in the above example, in view of the individual nature of the tax implications. Each investor is advised to seek appropriate advice.
