#### **About the Fund**

Parag Parikh Long Term Equity Fund (PLTEF) is an open ended equity oriented scheme with flexibility to invest a minimum of 65% in Indian equities and up to 35% in overseas equity securities and domestic debt/money market securities.

The core portfolio of PLTEF consists of equity investments made with a long term outlook and the factors considered while investing are quality of management, quality of the sector and the business (return on capital, entry barriers, capital intensity, use of debt, growth prospects etc) and the valuation of the companies. The endeavor of the fund management team is to identify opportunities for long term investments. However there are times when the opportunities are not attractive enough. While waiting for attractive opportunities, the fund invests in arbitrage opportunities between the cash and futures equity markets and special situations arbitrage where open offers / delisting / merger events have been announced. Investments are also made in money market / debt securities while waiting for deployment in core equity investments.

### Foreign equity investments

The fund invests in foreign equity securities. Since investors in PLTEF look for capital investment and returns in Rupee terms, PLTEF also looks at delivering in Rupee terms. PLTEF hedges most of the currency exposure using currency futures.

#### **Outlook**

Investors will see some build up in cash and arbitrage positions. This is not to say that we are trying to time the market. It is just that bargains are hard to come by and sale of existing positions or fresh inflows are waiting to be deployed. The overall market valuations are a bit stretched especially in the small and mid cap space. We continue to look at individual investments on their own merits and will not hesitate to invest if an opportunity looks attractive.

As usual, our investment stance does not depend much on the macro-economic situation but is focussed on individual companies. We have about 24% in cash holdings and arbitrage positions which can be deployed in long term investments at appropriate levels.

It is futile to predict market bottoms / tops or to time the market. One's investment horizon should be long enough to ride out the volatility. A staggered investment over time or a Systematic Investment Plan (SIP) is always better than a lump sum investment.

### We have our Skin in the Game

The combined holding of 'Insiders' in Parag Parikh Long Term Equity Fund amounts to 10.94% of the AUM as at March 28, 2018. For more details please visit the 'Scheme' section of our website.

#### **Definitions**

	As applicate of the good management company such as a mutual fund or life insurer who manages investment of the selection.
Fund Manager	An employee of the asset management company such as a mutual fund or life insurer, who manages investment of the scheme. He is usually part of a larger team of fund managers and research analysts.
Application amount for fresh subscription	This is the minimum investment amount for a new investor in a mutual fund scheme.
Minimum additional amount	This is the minimum investment amount for an existing investor in a mutual fund scheme.
SIP	SIP or systematic investment plan work on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests ₹500 every 15 <sup>th</sup> of the month in an equity fund for a period of three years.
NAV	The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.
Benchmark	A group of securities, ususally a market index whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmark include the Nifty, Sensex, BSE200, BSE500, 10-year Gsec.
Entry Load	A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged at the time an investor purchase the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is ₹ 100 and the entry load is 1%, the investor will enter the fund at Rs 101.
Exit Load	Exit load is charged at the time of redeeming (or transferring an investment between schemes). The exit load percentage is deducted from the NAV at the time of redemption (or transfer between schemes). This amount goes to the Asset Management Company and not into the pool of funds of the scheme.
Standard Deviation	Standard deviation is a statistical measure of the range of an investment is performance. When a mutual fund has a high standard deviation, its range of performance is wide implying greater volatility.
Sharpe Ratio	The Sharpe Ratio named after its founder, the Nobel Laureate William Sharpe is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.
Beta	Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.
AUM	AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.
Holdings	The holding or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in term of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.
Nature of Scheme	The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.
Portfolio Turnover Ratio	A measure of how frequently assets within a fund are bought and sold by the managers. Portfolio turnover is calculated by taking either the total amount of new securities purchased or the amount of securities sold - whichever is less - over a particular period, divided by the total net asset value (NAV) of the fund. The measurement is usually reported for a 12-month time period.

This product is suitable for investors who are seeking long term capital growth.

#### Investment objective of the scheme

The investment objective of the Scheme is to seek to generate long-term capital growth from an actively managed portfolio primarily of Equity and Equity Related Securities. Scheme shall invest in Indian equities, foreign equities and related instruments and debt securities.

Investors should consult their financial advisers if in doubt about whether this scheme is suitable for them.
