

Managing your money using
Value Investing principles!

Is 'recency bias' affecting you?

Mr. Rajeev Thakkar
CIO & Director

Wednesday, July 6, 2022

Investors could be of two types. The first type will have noticed that the equity market indices and Net Asset Values (NAVs) of our equity funds are somewhat lower than what were seen between October 2021 and March 2022. The other type of investor would not have noticed the fall or ignored the fall despite noticing it. If you are in the second category, congratulations. You need not read further.

For investors who are closely watching the indices, stock prices and mutual fund NAVs, especially those who are new to equity investing, I will say that it is not unusual for equity prices to fall. In fact it is of utmost importance that equity prices fall steeply over some period in an unpredictable manner!

Why do I say this? The answer is simple. If stock prices only went up, there would be no one investing in bonds or in bank fixed deposits and so on. *The reason why equity investments have the potential to deliver higher returns is that periodically they give negative returns as well which scares away short term investors and risk averse investors.*

There is a chance that some investors who have recently entered the market may see negative returns on their lumpsum / SIP investments currently. **Since our launch in 2013, we have been communicating that equity investments are suitable only for a minimum investment horizon of 5 years.** This has been due to the fact that the current situation is quite common and one has to be invested in equity across a bull and bear market cycle to really benefit from equity investing.

The current narrative is driven by discussions around inflation due to high energy and commodity prices, the war between Russia and Ukraine, rising interest rates, quantitative tapering, potential US recession and so on. Reading of the popular media narrative would lead us to believe that something unusual is happening in the world. However if one looks at interest rates, they are back to where they were about 3 to 3.5 years ago and crude oil prices are way below the peak levels seen in late 2007 and early 2008. High / low prices of crude oil, onions and tomatoes make for good news stories but at the end of the day they are subject to supply and demand disruptions (surplus as well as deficit) which are generally short lived and the prices mean revert generally in a short period of time. As I write this today, many commodities like iron ore, aluminum and copper are trading at significantly lower prices as compared to the peak prices seen a few months back.

Today we do not worry about COVID 19 while only a few months back there was nothing else that we could talk or think about. In the same manner, two years hence, it is very likely that we will have different things to worry about. Please do not let the turbulence and headlines distract you from your long term investment journey. Stick to your asset allocation based on your needs, life stage and risk appetite.

Happy investing.

Rajeev Thakkar

Chief Investment Officer and Director

Parag Parikh Flexi Cap Fund

(Formerly known as Parag Parikh Long Term Equity Fund)

An open ended dynamic Equity scheme investing across large cap, mid cap, small cap stocks.

Parag Parikh Liquid Fund	Interest Rate Risk			
	Relatively Low (Class I)	A-I		
	Moderate (Class II)			
	Relatively High (Class III)			

Parag Parikh Tax Saver Fund

An open ended equity linked saving scheme
with a statutory lock in of 3 years and tax benefit

An India-centric Scheme
suitable for long-term
wealth creation

Heritage

The Scheme is the third Offering from PPFAS Mutual Fund. The Fund, launched its first ever scheme in 2013, prior to launch Parag Parikh Tax Saver Fund in the year 2019 and is recognised for its focus on equity investing, low portfolio turnover and relatively conservative approach to money management. The Fund has been sponsored by Parag Parikh Financial Advisory Services Limited, a Company, which is a SEBI Registered Portfolio Manager since 1996.

PPFAS Mutual Fund's investment approach: We are guided by the timeless principles of Value Investing

We view equity investing as purchasing stakes in businesses, rather than merely investing in pieces of paper.

However much we like a Company, we avoid overpaying.

We prefer purchasing cash generating, low debt businesses

We like to partner with Managements who take care of the interests of minority-shareholders.

We stay away from periodic fads and fancies in the stockmarket, whether they be businesses, sectors or themes

We do not shy away from parking money in cash / cash equivalents in case we believe that valuations are stretched.

We employ the same investment approach in Parag Parikh Tax Saver Fund.

An India-centric Scheme

↳ At least **80%** of the Parag Parikh Tax Saver Fund's corpus will be invested in Indian equities.

It has the freedom to:

- ↳ Invest in stocks of small, medium and large-sized Companies based in India.
- ↳ Invest in any sector or industry within India which appears to be attractively valued
- ↳ Participate in buy-backs and other special situations within India.

Scheme Details

About the Scheme...

It is an open-ended Equity Linked Savings Scheme (ELSS) with a statutory lock-in of 3 years and tax benefit from the date of investment for every investment instalment.

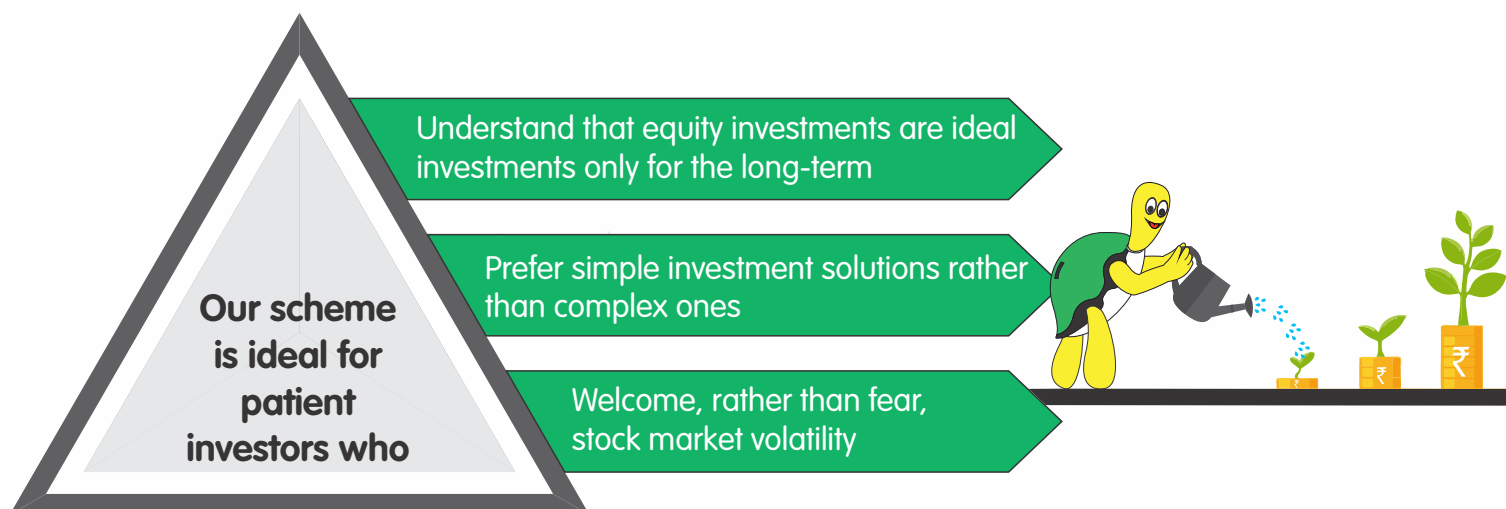

Indian investors who invest in this Scheme are eligible for Income Tax deduction u/s 80C upto a sum of Rs. 1.50 lakhs. However, this is not a ceiling. Amounts beyond that can also be invested in the Scheme.

While the income tax relief is certainly beneficial to many, the Scheme's other attributes mean that it could also be attractive to those who have exhausted this limit.

Also, we have always maintained that equity investments are best suited for investors who can remain invested for at least five years. The three year lock-in in Parag Parikh Tax Saver Fund is much lower than this, and therefore should not deter you.

It enjoys the same Capital Gains Tax benefits as available to other equity oriented schemes (viz. Gains will be taxed at a flat rate of 10%*)

*As per Income Tax Rules prevailing for the Financial Year 2022-23

Parag Parikh Tax Saver Fund will not suit you:

If you require to redeem within three years period from date of the investment.

If you are not comfortable with volatility in the Net Asset Value

If you depend on periodic income in the form of mutual fund dividends

Fund Managers

Rajeev Thakkar
CIO & EQUITY FUND MANAGER

Raunak Onkar
HEAD - RESEARCH & CO-FUND MANAGER

Raj Mehta
FUND MANAGER - DEBT

Rukun Tarachandani

Definitions

Fund Manager	An employee of the asset management company such as a mutual fund or life insurer, who manages investment of the scheme. He is usually part of a larger team of fund managers and research analysts.
Application amount for fresh subscription	This is the minimum investment amount for a new investor in a mutual fund scheme.
Minimum additional amount	This is the minimum investment amount for an existing investor in a mutual fund scheme.
SIP	SIP or systematic investment plan work on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests ₹ 500 every 15 th of the month in an equity fund for a period of three years.
NAV	The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.
Benchmark	A group of securities, usually a market index whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmark include the Nifty, Sensex, BSE 200, BSE 500, 10-year Gsec.
Entry Load	A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged at the time an investor purchase the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is ₹ 100 and the entry load is 1%, the investor will enter the fund at ₹ 101.
Exit Load	Exit load is charged at the time of redeeming (or transferring an investment between schemes). The exit load percentage is deducted from the NAV at the time of redemption (or transfer between schemes). This amount goes to the respective scheme and gets added to the AUM of that Scheme
Standard Deviation	Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund Scheme has a high standard deviation, its range of performance is wide implying greater volatility.
Sharpe Ratio	The Sharpe Ratio named after its founder, the Nobel Laureate William Sharpe is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.
Beta	Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.
AUM	AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.
Holdings	The holding or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in term of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.
Nature of Scheme	The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.
Portfolio Turnover Ratio	A measure of how frequently assets within a fund are bought and sold by the managers. Portfolio turnover is calculated by taking either the total amount of new securities purchased or the amount of securities sold - whichever is less - over a particular period, divided by the total net asset value (NAV) of the fund. The measurement is usually reported for a 12-month time period.
Yield to Maturity (YTM)	The yield to maturity (YTM) of a bond or other fixed-interest security, such as gilts, is the (theoretical) internal rate of return (IRR, overall interest rate) earned by an investor who buys the bond today at the market price, assuming that the bond is held until maturity, and that all coupon and principal payments are made on schedule.
Modified Duration	Modified duration is a formula that expresses the measurable change in the value of a security in response to a change in interest rates. Modified duration follows the concept that interest rates and bond prices move in opposite directions.
Total Expense ratio	The total expense ratio (TER) is a measure of the total cost of a fund to the investor. Total costs may include various fees (purchase, redemption, auditing) and other expenses. The TER, calculated by dividing the total annual cost by the fund's total assets averaged over that year, is denoted as a percentage.
